Company Introduction: EPV Electronic GmbH

Company

- Founded 1990 in Germany
- Development & manufacturing of energy saving controls
- ISO 9001 certified manufacturing,
- Almost all EPV products are designed and manufactured to 100 % in Germany.

Business activities

- Range of innovative lighting & aircon control equipment
- Proprietary product range + technology partner for OEMs

Main products

- Occupancy sensors, motion sensors, light sensors
- Dimming ballasts
- Dimmers
- AIRCOSAVER

Contact

- Phone +49 2394 91840

Research & Development

Manufacturing (Germany)
ISO 9001

Introduction: Unique ecos Advantages

EPV

Digital PIR sensor head for maximum sensitivity & reliability

- · Market-leading sensitivity
- Very small, looks great in any ceiling
- Practically immune to mistriggerings

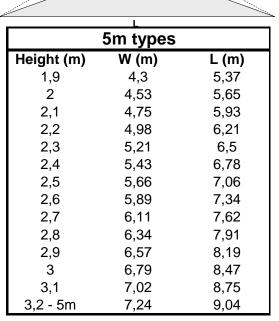

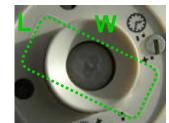

Settings easily accessible on front of sensors

 Easy & quick adjustments without having to take the sensor out of the ceiling.

Rectangular coverage area with simple adjustability (pull-out shading ring)

3 Ceiling Installation Options & Accessories

Flush Mounting into false, partitioned ceilings.

- Applicable to all false/suspended ceilings when you can reach around to the rear of the sensor and put the clip onto it.
- Clip supplied with each sensor

Spring Clip for flush mounting into false 1-piece ceilings

- Applicable when standard clip cannot be placed onto rear of sensors, e.g. in plasterboard ceilings
- Similar to down light fitting
- Product no. 101683

Surface Mounting Enclosure

- Applicable when flush mounting is not possible, e.g. on bare concrete ceilings.
- Product no. 101472

3 Main Application Scenarios

The ecos sensor range offers solutions for all your main application scenarios:

Individual / Standalone

230V Sensors (with powerful built-in relay)

Large Areas

24V Sensors plus Power Pack

Integration into control systems

24V Sensors
Open Collector Output
or potential free relay

Scenario 1: Individual / Standalone

EPV

Individual / Standalone

230V Sensors (with powerful built-in relay)

Large Areas

24V Sensors
plus
Power Pack

Integration into control systems

24V Sensors
Open Collector Output or potential free relay

Scenario 1: Individual / Stand alone

230V sensors with powerful built-in relay

 Double-latch Tungsten relay for maximum reliability and very long lifetime (2300 VA constant power / 800 A inrush current)

Typical applications: individual offices, meeting rooms, class rooms, kitchens, toilets etc.

Various wiring / connection options

WAGO Kit with strain relief & cover

Standard 100956 / 101426 (1-10V) included in all quoted 230V sensor prices

Wiring Adapter (full 6-core)

On request

Several models

available on request

WIELAND / WINSTA full plug & play pre-wiring

Occupancy Sensing (on/off, no dimming)

ecos PM/230V/5

Simple on/off, based on occupancy only, <u>fixed delay time</u> 10 minutes, no twilight switch, 2300 VA / 800 A inrush, max. 5 m height 101918

ecos PM/230V/5T

Simple on/off, based on occupancy only, <u>adjustable</u> delay time 10 seconds
 14 minutes, no twilight switch, 2300 VA / 800 A inrush,
 max. 5 m height

ecos PM/230V/5L (suitable for most applications!)

 On/Off, with adjustable delay time 10 seconds - 14 minutes, adjustable twilight switch 100-1000 Lux, 2300 VA / 800 A inrush, max. 5 m height

Occupancy Sensing (on/off, no dimming)

ecos PM/230V/12

 Simple On/Off, based on occupancy only, <u>fixed delay time</u> 10 minutes, no twilight switch, 2300 VA / 800A inrush, max. 12 m height, 102052

ecos PM/230V/12T

Simple on/off, based on occupancy only, <u>adjustable</u> delay time 10 seconds
 14 minutes, no twilight switch, 2300 VA / 800 A inrush current,
 max. 12 m height

ecos PM/230V/12L

 On/Off with adjustable delay time 10 seconds - 14 minutes, adjustable twilight switch 100-1000 Lux, 2300 VA / 800 A inrush current, max. 12 m height 102054

Occupancy Sensing + Daylight Dimming 1-10V

ecos PM/230V/5LSa DIM

- On/Off + Daylight Harvesting (1-10V dimming) output, adjustable delay time 10 seconds - 14 minutes, adjustable dimming set point 100-1000 Lux, max. 5 m height.
- · Off-Priority: Light level.

101921

• **Explanation:** When sufficient ambient light is available, the artificial light will remain in maximum dimming position for the set delay time. After that, the artificial light is turned off, regardless of motion in the room. **Highest savings.**

ecos PM/230V/5LSb DIM

- On/Off + Daylight Harvesting (1-10V dimming) output, adjustable delay time 10 seconds – 14 minutes, adjustable dimming set point 100-1000 Lux, max. 5 m height
- Off-Priority: Motion

101922

• **Explanation**: When sufficient ambient light is available, the artificial light will remain in maximum dimming position as long as there is any motion in the room. The lights will turn off only when the room is vacant. **Lower savings.**

ecos 230V Occupancy Based Dimming Sensors

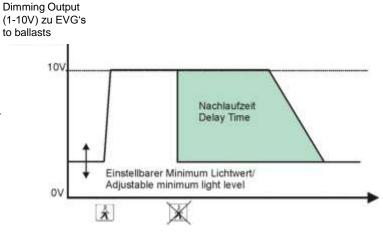

Occupancy Based Dimming 1-10V

These sensors dim the artificial lights when an area is not occupied. Both the minimum level and the time after which dimming occurs can be adjusted. They do NOT switch off. This is also known as "Corridor function" or "Standby function".

Dimming takes place in smooth ramps, not abruptly.

Ideal for: Supermarket aisles, corridors in hospitals or pensioners' homes, parking decks ...

ecos PM/230V/5K DIM

Occupancy based dimming sensor. 1-10V output, dims when area is not occupied and ramps up when occupied. Adjustable minimum level 1-5V (typ. 10% - 50% brightness), adjustable delay time 10 seconds - 14 minutes. Dims in smooth ramps, max. 5 m height.

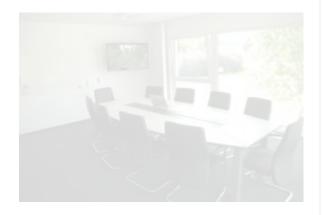

ecos PM/230V/12K DIM

Occupancy based dimming sensor. 1-10V output, dims when area is not occupied and ramps up when occupied. Adjustable minimum level 1-5V (typ. 10% - 50% brightness), adjustable delay time 10 seconds - 14 minutes. Dims in smooth ramps, max. 12 m height.

Individual

230V Sensors (with powerful built-in relay)

Large Areas

24V Sensors plus Power Pack

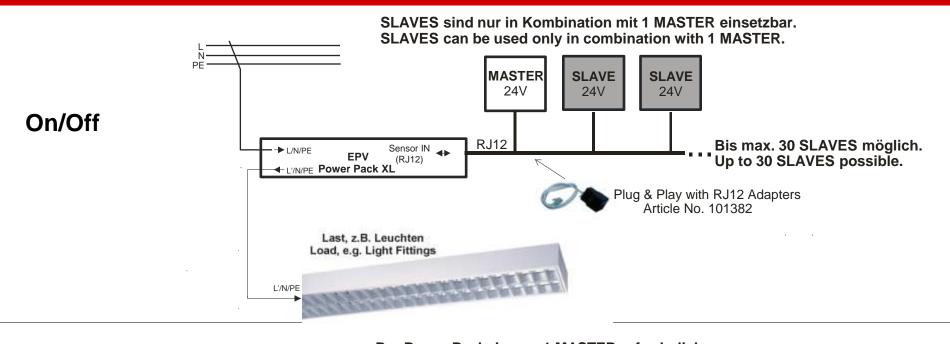

Integration into control systems

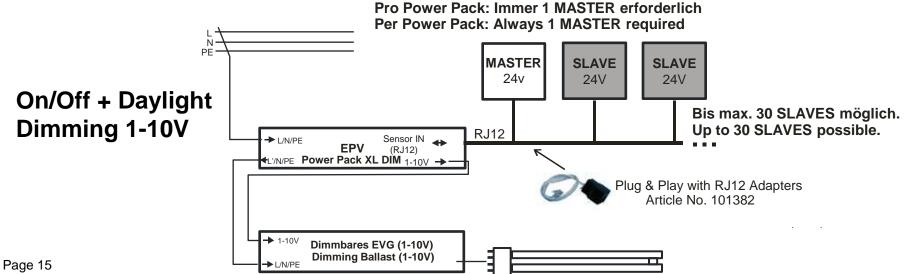

24V Sensors
Open Collector Output
or potential free relay

Scenario 2: 24V MASTER / SLAVE + Power Pack

Occupancy Sensing (on/off, no dimming)

ecos PM/24V/5 MASTER

 Simple On/Off, based on occupancy only, <u>fixed delay time</u> 10 minutes, no twilight switch, potential free relay, coverage extension with SLAVES possible, max. 5 m height

ecos PM/24V/5T MASTER

Simple On/Off, based on occupancy only, adjustable delay time 10 seconds –
 14 minutes, no twilight switch, potential free relay, coverage extension with
 SLAVES possible, max. 5 m height

ecos PM/24V/5L MASTER

On/Off with adjustable delay time 10 seconds - 14 minutes, adjustable twilight switch 100-1000 Lux, potential free relay, coverage extension with SLAVES possible, max. 5 m height.

102045

ecos 24V Occupancy Sensors: 12 Meter MASTER

Occupancy Sensing (on/off, no dimming)

ecos PM/24V/12 MASTER

Simple On/Off, based on occupancy only, fixed delay time 10 minutes, no twilight switch, potential free relay, coverage extension with SLAVES possible. 102046 max. 12 m height

ecos PM/24V/12T MASTER

Simple On/Off, based on occupancy only, adjustable delay time 10 seconds - 14 minutes, no twilight switch, potential free relay, coverage 102047 extension with SLAVES possible, max. 12 m height

ecos PM/24V/12L MASTER

On/Off with adjustable delay time 10 seconds - 14 minutes, adjustable twilight switch 100-1000 Lux, potential free relay, coverage extension with SLAVES possible, max. 12 m height 102048

Occupancy Sensing + Daylight Dimming 1-10V

ecos PM/24V/5LSa DIM MASTER

- On/Off + Daylight Harvesting (1-10V dimming) output, adjustable delay time
 10 seconds 14 minutes, adjustable dimming set point 100-1000 Lux, coverage extension with SLAVES possible, max. 5 m height

· Off-Priority: Light level.

- 102049
- **Explanation**: When sufficient ambient light is available, the artificial light will remain in maximum dimming position for the set delay time. After that, the artificial light is turned off, regardless of motion in the room. **Highest savings**.

ecos PM/24V/5LSb DIM MASTER

On/Off + Daylight Harvesting (1-10V dimming) output, adjustable delay time
 10 seconds - 14 minutes, adjustable dimming set point 100-1000 Lux, coverage extension with SLAVES possible, max. 5 m height

Off-Priority: Motion

- 102050
- **Explanation**: When sufficient ambient light is available, the artificial light will remain in maximum dimming position as long as there is any motion in the room. The lights will turn off only when the room is vacant. **Lower savings**.

ecos 24V Occupancy Based Dimming MASTERS

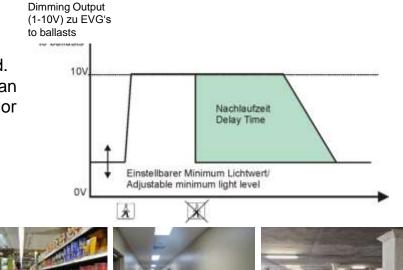

EPV

Occupancy Based Dimming 1-10V

These sensors dim the artificial lights when an area is not occupied. Both the minimum level and the time after which dimming occurs can be adjusted. They do NOT switch off. This is also known as "Corridor function" or "Standby function".

Dimming takes place in smooth ramps, not abruptly.

Ideal for: Supermarket aisles, corridors in hospitals or pensioners' homes, parking decks ...

ecos PM/24V/5K DIM MASTER

Occupancy based dimming sensor, 1-10V output, dims when area is not occupied and ramps up when occupied. Adjustable minimum level 1-5V, adjustable delay time 10 seconds -14 minutes. Dims in smooth ramps. Coverage extension with SLAVES possible, max. 5 m height.

ecos PM/24V/12K DIM MASTER

Occupancy based dimming sensor, 1-10V output, dims when area is not occupied and ramps up when occupied. Adjustable minimum level 1-5V, adjustable delay time 10 seconds - 14 minutes. Dims in smooth ramps. Coverage extension with SLAVES possible, max. 12 m height.

ecos 24V SLAVE Sensors

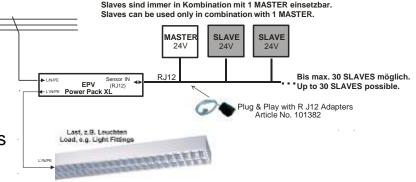

SLAVE sensors: extension of coverage area

The coverage of every MASTER sensor (any type) can

be extended with up to 30 SLAVE sensors.

Together, the MASTER and SLAVE sensors act like one sensor with a very large coverage area (i.e. in parallel).

All settings are done only on the MASTER – the SLAVE has no adjustments.

ecos PM/24V/5 SLAVE

SLAVE sensor for coverage area extension, max. 5 m height.

101798

ecos PM/24V/12 SLAVE

SLAVE sensor for coverage area extension, max. 12 m height.

ecos Power Packs for 24V sensors

Power Packs

ecos Power Pack DIM

Simple power supply for the ecos PM/5K and /12K Master dim. Connects 1
 MASTER sensor and up to 30 SLAVE sensors. With strain relief & terminal
 covers.

ecos Power Pack XL DIM

On/Off + Daylight Dimming, switches 2300 VA / 800 A inrush. Connects
 1 MASTER sensor and up to 30 SLAVE sensors. 1-10V dimming output. With strain relief & terminal covers. For MASTER sensors WITH Daylight Dimming output (e.g. ecos PM/24V/5LSa).
 102144

Power Packs

ecos Power Pack DIM RF with additional manual dimming mode

On/Off + Daylight Dimming + Manual Dimming Mode (e.g. for conference rooms), with remote RF receiver function. 1-10V dimming output.
 Switches 2300 VA / 800 A inrush. Connects 1 MASTER sensor and up to 30 SLAVE sensors. With strain relief & terminal covers. For MASTER sensors WITH Daylight Dimming output (e.g. ecos PM/24V/5LSa).

RF Remote Control, single channel

101400

ecos Power Pack DALI

 Supports up to 45 DALI devices or LED-drivers. Enables DALI dimming and switching. DALI Master in broadcast mode. Connects 1 MASTER sensor and up to 30 SLAVE sensors or EPV DAYTRONIC sensors to control DALI devices. With strain relief & terminal covers.

24V RJ12 Accessories (plug & play)

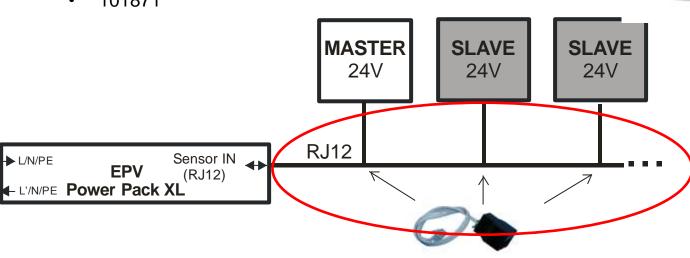

2-into-1 RJ12 Adapters

- Used for plugging several 24V sensors together (MASTER / SLAVE)
- Rule of thumb: Typically 1 unit per SLAVE sensor required.
- 101382

6 meter RJ12 cable

- For connecting several 24V sensors together
- 1-to-1 straight through cable 6P6C
- 101871

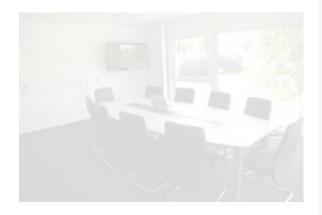

Plug & Play with RJ12 accessories

Scenario 3: Building Control Systems

Individual

230V Sensors (with powerful built-in relay)

Large Areas

24V Sensors plus Power Pack

Integration into control systems

24V Sensors
Open Collector Output
or potential free relay

Building Controls - Basics

All of the 24V sensors listed on the previous pages can be used in most building control systems.

- In this case no EPV Power Pack is necessary.
- The voltage supply is taken from the control system, AC or DC
- ecos sensors can operate on a wide voltage range (e.g. 10.8 28V AC or DC for the On/Off models).
- Can be used in most DALI, KNX or similar systems
- Popular for Home Automation systems

MASTER / SLAVE option for large coverage areas

 MASTER & SLAVE sensors can be combined to extend the sensor area (1 MASTER with multiple SLAVES)

One extra model for control systems is available: ecos PM/24V/5LSc MASTER

 Potential free relay or Open Collector Output of Occupancy Signal with 10 seconds fixed delay time. Light linear analog output (active and passive) 1-10V:

100 Lux = 10V, 1000 Lux = 1V, max. 5 m height 101318

ecos 24V Sensors in Building Control Systems

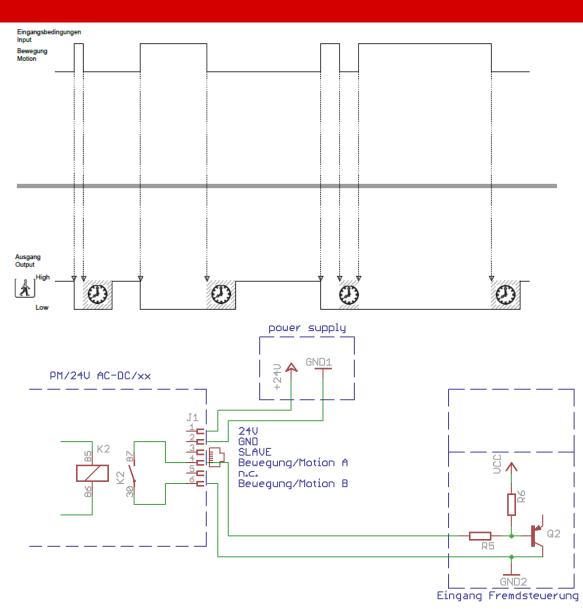

Example of Open Collector Logical Output:

Example of how to use the potential free relay inside the occupancy sensor

Extensive technical details and support are available. Please contact us.

info@EPVelectronics.com

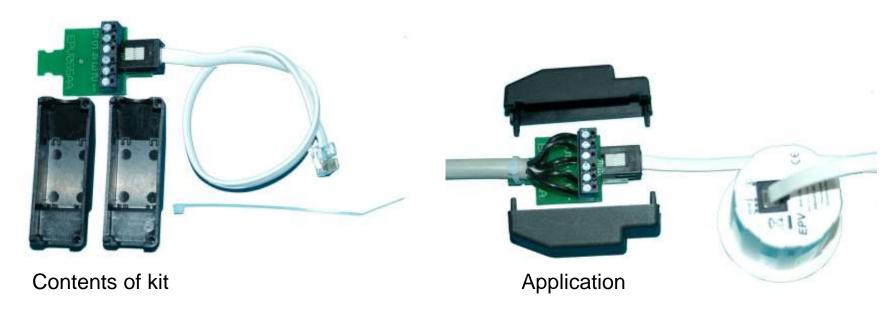

Building Controls - Accessories

Cable Adapter KA2 Set

- Allows easy access to the signals on each core of an RJ12 cable
- RJ12-plug to 6-core screw terminal

101947

More plug & play RJ 12 accessories are available, please refer to page 22.

Recommended shipping partners

Samples & Small Orders

• UPS Expedited, (preferential pricing) or any logistics company of your choice.

Medium orders

- SCHENKER or Quick Cargo AIR Freight, CIF to next airport
- SCHENKER/ Quick Cargo / UPS Cooperation, DAP (door-to-door)
- or any logistics company of your choice.

Large Orders

- SCHENKER or Quick Cargo SEA Freight, CIF your next port, door-to-door on request
- SCHENKER or Quick Cargo AIR Freight CIF to next airport
- or any logistics company of your choice.

We are happy to work out a detailed quote for you Please contact us info@EPVelectronics.com
